

## Villian's / MMDCASH's E-whore E-book Guide

In this e-book I'm going to cover...

- E whoring basics
- Craigs list Bot Pro / Posting on craigslist
- Back page
- How to use proxies
- How to use PVAs
- Auto responder(s)

**First thing's first..Sign up to the best affiliate network around! AMAZING Support...ABSOLUTELY NO SHAVING and FREE Training with WEEKLY Payouts! Click the link below to join!**

<http://www.mmdcash.com/signup.php?ref=315818>

E-whore basics..for those of you who don't know what e-whoring is, It is setting up a 'fake' female profile on a dating affiliate website that either pays you per credit card submit or some pay you per e-mail submit. The difference is when a guy goes to a landing page he will see a "Join 1" form where he enters his "information" then when he hits next it goes to a credit card submit page, as where with a e-mail submit you complete the first page then put your email in the second and confirm and that's it. The pay is quite different, most e-mail submit e-whore affiliates pay between 3-4\$ a email and Credit card submit pays 20\$-30\$ depending which network your with.

To start e-whoring there are many ways it can be done, Via msn/aim/yahoo/chat rooms but the most common one is posting on classified sites pretending your a female. Which ever one you choose there are many many different methods. I'll explain a few in this e-book.

Craigslist posting:

When posting on craigslist you'll need a few things, 1. PVA's 2. Proxies or a DSL Connection 3. Good ad copies 4. E-mail(s) to send the leads to.

There are some great pva providers on [www.moneymakerdiscussion.com](http://www.moneymakerdiscussion.com) , as for proxies I would recommend using "Texacola" his proxies are amazing, I've had a chance to use a few. Other option is getting a DSL connection with a DSL provider in your area and make sure the connection you get allows you to change your IP this is very important when posting it is called a Dynamic IP address.

Now the rule with PVA's is to post 1 ad per 48hours per IP. That means if you have 25 PVA's and 25 Proxies. You can post 25 ad's every 48hours. Now you can post 3-5 ad's per IP but I'd suggest staying around the 2 post mark. If you have DSL you won't need to worry, Just change

your IP every few posts. Another thing that is very important is to clear your cookies and cache.

If your posting manually then 25 ad's a day should be fine just make sure your ad's are VERY unique and NON spammy looking, Post a classy picture of a female. Nothing to slutty...It looks fake if a girl is standing there with her bra half off...The guys who go on craigslist have seen it millions of times before and don't fall for it much anymore. Make your ad 2-6 lines, mention a hobby or two, and maybe what the 'First" date would be like..

Example:

Hey everyone hope all is going well today! I'm posting on craigslist to see what's out there. I'm not looking for anything to crazy. Some things I enjoy doing are cuddling up and watching a movie with that special someone and I also love hiking. I think if your willing to meet we can meet for dinner some where and get to know each other a bit before we take it back home! Let me know if your up for this, we'll make it a fun night!

You kind of get the idea. Twist and make your ad unique. Even go back 10-15 pages on old W4M posts and read some of them to get an idea of what to do.

Think of it this way, If it sounds to good to be true, then most likely it is! For pictures go to Google or imagefap.com and find pictures of girls in their under wear in front of a mirror that look kind of distorted.

### **This kind of has to do with automation but can and will work with manual posting**

Now that you have your ad copy done your ready to move on to e-mails. Theres a secret I still use with g-mails and it's a program called "Gibble Mail" I'll include it with the purchase of this e-book. What it does is, Takes 1 g-mail and turns it into 1000's of e-mails. Which is very useful for posting on craigslist, Because then you only have 1 g-mail being forwarded it to your @domain e-mail instead of 50 which will most likely be banned and you lose a lot of leads. This way all the leads and everything go to 1 g-mail then go to 1 domain. - As far as I know it only works on CL bot pro and Not CLAD. Most of you will need PVA's to post, when you buy pva's you can import them into CL bot under settings then clicking "CL Accounts"

Now once your done doing the "gibble mail" to your g-mails. Make sure you move the file whichever you named it to your desktop then open your Bot. I'm going to use CL Bot Pro as an example. Here' is a picture

<http://i37.tinypic.com/2mchh6u.jpg>

You want to click "Email list" and then hit "From File" and open your text file with all the emails.

It should look like this once you've uploaded them:

<http://i33.tinypic.com/288mvjp.jpg>

Now if your posting manually just take the first 25 gibble'd g-mails and use those in the email address part of the post.

Now for captcha's I'd suggest using decaptcher or captcha king. Although decaptcher is a way cheaper solution, It is 2\$ per 1k. Which is an amazing deal, Where Captcha king is 39\$/1k.

If your using CL Bot Pro to post, you'll also need to token your ad's

Example of a token'd ad I've done up quickly...It's sloppy but it's just to give you an idea how they should work/look.

Example:

!random{I'm going to|Lets} get straight to the point. I am a !random{very|really|super} !random{hot|sexy|attractive} and !random{exciting|adventurous|funny} !random{woman|girl|lady|person} looking for !random{some|a little|a bit of} uninhibited fun. I am !random{5'6"|5'7"|5'8"}, !random{36C|34C}, I have a !random{nice round|big|phat|great} ass. It !random{deserves|needs} a !random{pounding|spanking}, and I am pretty much game for !random{anything|whatever}. I would !random{love|like} to be with a !random{man|guy} or a !random{couple|man and a woman}. I am very into threesomes! What !random{do you have to|can you} offer?

Obviously you need to change words around so it doesn't look spammy and fake.

!random{Hey|Hi|Hello} means it will randomize those 3 and pick 1 of the 3 at random every post.

!rotate{Hey|Hi|Hello} means it will just start at "Hey" then go to "Hello" it rotates through how ever many variables you have in it.

I'd suggest spending time on token'd ad's make 5 new one's each day, It shouldn't take you more then 2 hours once you get use to it. Also when you select cities refer to

<http://www.alex.com/siteinfo/craigslist.org> and scroll down and Click "more" just under "Where people go on Craigslist.org" it gives you a list of the most popular cities and an idea on where to post to maximize your leads.

Also another thing, you can use Dial up with CL, Copper net lets you dial in right to the state which is a big plus. It's slower but it can benefit you in more ways then one.

I think that about covers it for craigslist posting. Now on to Back page!

Back page posting:

For those of you who don't know what back page is. I believe they are now the second or third largest classified site in the world. A lot of people post on their also along with craigslist just to gain a few more sales, you can easily make 10-20 sales a day off back page if you do it right.

It's A LOT easier to post on back page seeing you don't need to change your IP every post. You need to change it every 1000 or so. I change mine every 500. This tutorial will be short but to the point.

Ads on back page are simple, you can do the same add 500 times if you like, there is no "duplicate" found error, they don't track it. I'd suggest going to plenty of fish and finding a girls profile that describes her good then make 10-20 campaigns on back page bot pro if your using that to post. Also use catchall when posting. Host gator offers catchall for your domain. Example of a catchall is "[g95jdk@domain.com](mailto:g95jdk@domain.com)" it puts a random text in front of the @domain then it forwards all the mail to the main e-mail address. Same picture rule applies with back page, make it look classy. Back page has been raped pretty bad but they've changed it so not many people are posting as before. You'll need captcha king to post on back page.

Now on to a auto responder. There are a few options, Easy Auto responder/Thunder bird/Inter spire.

I personally use Thunderbird and easy auto responder so I'll cover those mostly.

When setting up a responder, you will need a GOOD response especially when replying to the e-whore leads. Here's an example of what to do.

Example:

"Hi there, I hope all is well...I appreciate you taking the time to message me showing your interest, I must of done something right. Like I said in the ad I love watching movies and being active, a few other things I love doing is going out for a social drinking night, kind of loosen up the mood. I'm not sure if your familiar with the craigslist killer but it actually happen down the street from me, I don't mean to throw this on you, But I have a profile setup online which is 100% Free to view etc and contact me, I wish to keep in contact via that...." you get the idea kind of.

Or even do

"Hey I sent you a e-mail about an hour ago and I still haven't heard back so I just wanted to see whats going on? I mentioned in my first email I use a online profile to keep in touch with everyone here it is in-case you missed the first email.

Even though you never sent him a first e-mail. Just twist it and come up with your own very unique response and your good to go.

When setting up easy auto responder you'll want to make sure you set up your pop3 and smtp server correctly so go to

Mail>Account manager>Pop3 accounts in easy auto responder. And punch in your correct information you'll want to put in the e-mail where all the leads are being forwards/going to. Make sure requires authentication is set to true and leave copy on server is set to false. Set the check mail to 5. Make sure the port is set to 110. Once you have in the correct info highlight the server and go to test servers>test selected. If the ball goes green on the bottom then its good, if it goes red then there is a problem with the settings.

Next you'll want to go to Manage Smtп accounts. Fill out the same information with what you put in pop3, set Max sends per day to 15,000 and max sends per house to 400 also be sure the Port is set to 26, More internet providers block port 25. Once again test.

Setting up your template:

Click template then click New template, what your going to want to do is leave the "To address and to name" the same, but put "From address" make that the email address you made your Pop3 and put in the "Fake girls name" you can either leave or change the subject title. I usually set my sending delay to 7-20 minutes for the 1<sup>st</sup> response. Now go to body and paste your response with your link or if your doing a 2 reply and the 2<sup>nd</sup> email have the link don't put the link in the first email if you do not wish, Take note you loose A LOT of traffic from 1 response to 2. Now hit OK and OK again. If your doing a second reply just make a new template and change the delay to something like 50minutes up to 75minutes. You'll then want to go to tools>settings and change a few things, Make sure the check mail is set to 5 and the leave copy on server is set to false. Also change under the SMTP global settings the max sends per day and hour, 400per hour 15,000 per day. Then set SMTP Repeat recipient message limit to 2.

Next your going to want to set up a filter so click on filters then hit "New filter" name it "Filter 1" or whatever you like. Your going to then click "Template response" and use template one, Once you've made your template do this. Then click "must match all conditions" and hit "Add new" and go to special change the type to "Received by account" and the mail account to the one you made. Then hit OK, and OK again. Next your going to want to make one called "Delete" what your going to do is instead of clicking "template response" your going to want to click "Delete" then click "Can match any conditions" > Add new > Subject contains "Mail delivery" and "Failure" also "[support@backpage.com](mailto:support@backpage.com)" just so your template doesn't go to them.

Now setting up Thunderbird:

What you'll want to do with Thunderbird is open it up once you've downloaded it then go to tools>account settings>Add account and add the information, user name/password/mail

server etc. Once that is done you'll want to scroll down in the box to the bottom where it says "out going" and click that and hit "Add" make the description anything but make sure the server is either your websites IP or the mail.domain.com make sure the port is 26 then hit OK. Then your going to want to click on the email you just added and change the out going server to the correct one. Once that is done your good to go.

Now setting up filters. Go to Tools>message filters now your in the filter menu, Hit new filter and where it says "Subject contains" put "post" then hit the plus and fill the other one out with "Click link" then what your going to do is right click on the side under all folders, right click on the e-mail and go to "New folder" and name it "posts" then go back to the filter menu and under "perform actions" go to "Move to" and the next one and put it to the "post" folder you just made. Rinse and repeat what is above but change the "Subject contains" to "Failure" and "Mail failure" and move them to the trash bin.

Now your ready to make your template. Hit OK and go back to the main Thunderbird screen. Click write and post your message/response in there then where it says save there is a arrow, click that and hit "save as template" once that is done exit out and go back to the filters menu and make a new filter and call it "Template 1" make sure "Match all messages" is clicked then go to the bottom and change it to "reply with template" then choose your template and hit OK, make sure it's clicked off in the filter box, because you don't want it replying to everyone as soon as the leads come in. Now all you have to do when leads come in is go to message filters, click the "Template one" and then make sure its running on the in box and hit run now and your good to go. You can make filters for everything with Thunderbird, just play around a little with it!

**What I've wrote above if you follow and read a few time's it will all make sense and follow, But one thing to make sure you do is DO NOT COPY anyone's method/responses/ads all it will do is SATURATE it more and you BOTH lose in the end because it burns out faster. Uniqueness = more money. Think outside the box, Part of the problem these days is that people are lazy and don't take action or think outside of the box! I've done EXACTLY what I wrote above and I've made XX,XXX in the past 6 months..I've made this my full time income and full time job, and you can to.**

If you need ANY assistance or help, feel free to message me on AIM : Villian54.

Thank you for purchasing this e-book.
