

Skijacked's YouTube Made Simple Ebook

Notice: If you paid anything for this ebook then you are a complete idiot, it is free and available for anyone.

This is my first time writing an ebook, so if it seems unorganized or a little bit sloppy you'll know why.

Today I'm going to show you how you can get yourself a head start advantage on YouTube. You could reach the fame of some of the biggest channels or you could silently dominate your competition on a certain niche. Regardless to what you want to do you will see that YouTube is easy to use in marketing or getting popular on.

What matters first is your YouTube videos. Naturally you can use windows movie maker to get a nice little video going and compile up some things. There are also cracked versions of other video studios but that you can find on your own on YouTube or some torrent sites.

If you don't have any content and want to get started you can use www.keepvid.com to download YouTube videos. So you could let's say download some music videos with lyrics posted on them and you'd have a music video channel going. You can always put in some title screens in the beginning to say anything you want, like if you want them to check out your website or if you want them to subscribe. This way you have a better chance of your video not getting removed from YouTube because it looks unique. It's good to build a rhythm of posting videos this way, 1 a day is good and you'll have a stable channel growing in no time.

Now to make your video YouTube "SEO" friendly here's some tips on titles, tags, and your description.

When coming up with a title for your YouTube video the title should be catchy, but also descriptive. You want viewers to have some idea of what they are in store for when they see your title. For instance, don't call your funny dog video "Bobby Acting Up". Nobody knows who Bobby is or that he is a dog, and from this title you can't tell what the dog is doing. A much more effective title would be "Funny Dog On Treadmill."

With tags I always keep it relevant to my video. Don't put random or misleading tags on your video, it could result in your video getting flagged and removed and it won't help you rank for a particular phrase if you are trying to do that.

Your description should explain exactly what is being shown in the video, plain and simple. You want your description to be short and concise so that viewers can easily read it to find out what they will be watching in your video.

Bear in mind that only about twenty-five to thirty characters of your description will be visible in YouTube search results, so the shorter the better. If you want to share a long description, explaining how the video was made or where you were when you shot it, that's ok too. Just make sure that the first couple of sentences are attention grabbing and descriptive, as this is what will show up in the search results. Try to keep it relevant to your title as well.

Try using a couple of your most relevant keywords in the title as well, as this will help with YouTube search results.

Now your videos could be really good and YouTube optimized but at 0 views with no ratings, comments, or subscribers you won't see your video go anywhere. All of those things that I mentioned matter in how your video will rank. It's like similar to Facebook and Twitter, without comments or things being liked or not having people ready to read your stuff your video won't go anywhere. Also YouTube views do affect rank as well; because only quality views are counted YouTube will generally rank popular videos over videos with no views.

So what do you do to build your channel? Simple, use this free website called enhanceviews.net.

What they do is let you auto view YouTube videos, auto comment and like videos, or subscribe to channels to gain credits. You can redeem your credits for numerous things, such as views, comments, ratings, or subscribers. All people will stay subscribed to you, if they don't you can report them and you'll get your credits refunded back to you along with a little bonus.

By using the link that I posted above rather than getting 0 credits on sign up you will get 250 credits. You can refer people to get 10% of the credits they get (they don't lose anything). I'll show you how you can easily refer people on YouTube.

All you need is the YouTube friend bomber bot. Here's the site: <http://www.stealthfriendbomber.com/>. Here's the one time unlimited serial code too: 11Y11Y1111Y11111Y.

All you have to do is gather user ids and send them messages. You can also build some subscribers and friends too by telling them to watch your videos.

Now with my last method you can automate YouTube subscribers, comments, and ratings.

Here's a free YouTube bot that will automate this process.

<http://www.mediafire.com/?my2jjnnftgddj0z>

Next you will need to get YouTube accounts. I will show you two ways to bypass the SMS verification process to create YouTube accounts. You can do those or buy YouTube accounts from people for about \$8-\$12 per 100 accounts.

Here are the two methods to make accounts:

First download google chrome Use private browsing (New incognito window or something). Make a Gmail account, it will not ask for SMS verification. Create a youtube account, fill out the first page with your username, etc. On the second page instead of filling in the right, login to your google account on the left!

And here's the other one...

- 1) Go to youtube.com and click create account
- 2) Fill the relevant spaces On the first page of registration, but follow these rules to do so
 - Your name must be unique, i suggest you people to use names which are less popular.
 - Choose different password for each account, password must also be something not popular.
 - Do not use numbers for your password or account
- 3) Click "I accept"
- 4) Fill the e-mail box with some fake e-mail address.
Give a password which is unique as mentioned in step 2. Fill the captcha and create your account.
- 5) Now you have to verify your account by the e-mail.
- 6) Now Click on Used the wrong email address? Click on my account. Click on change e-mail, and in the e-mail, give any e-mail address hosted at yopmail.com Give the password and click on save e-mail address.
- 7) Now go to <http://www.yopmail.com> and use the e-mail that you entered on step 6. You will find an e-mail from Google with the subject: "Google Accounts: Email Change Verification", click on it and verify your account by copying and pasting the link into your address bar and visit it. Don't forget to delete your verification e-mail.
- 8) Enjoy the account.

If you want to do the free method I suggest grabbing some buddies you trust and making each like 5 accounts a day. 10 people that make at least 5 accounts a day means in a month you'll have 1,500 accounts! The subscriber amount will be good and comments will show activity in your video and the likes gives you the advantage over newer videos!

So this is my guide! Please thank me and if you feel this guide is good enough then nominate it :D, it'll make my day. Also keep your head up if I try to make a community account creation thing so that we will have a massive amount of accounts. I'll be picking members who are trust worthy and ones that will not screw us over.

Thanks for downloading and reading this!
