

Dear Sir / Madam

The Web Business Security Device is pocket-sized, powerful and easy to use. The device gives you an extra layer of protection for more sensitive online banking transactions. We're proud to offer this industry-leading level of protection for your evolving business online banking needs.

The device will generate a unique 6-digit code that you will need to enter when you log on to TD Web-Business-Banking and proceed with the synchronization master key update by following the link below.

Two-factor authentication: [Secure Sign-In](#)

The Web Business Security Device uses two-factor authentication to provide an added layer of protection when you bank online. You are required by your client agreement to resynchronize your device with the new master key periodically.

Note: To avoid missing cut-off times or transaction(s) authorization(s) please synchronize your security device immediately.

Thank you for playing your part in keeping your online banking safe and up to date.
